

SAHRIS OBJECT PDF REPORT

Object Code: BRS-SEDIMENT-CASEID12484

Quantity: 14.00

Cultural Association:

Maker:

Production Place:

Description:

Sedimentary samples will be subjected to DNA extraction protocols and analysed to ascertain the ancient pathogenic (bacterial, viral and fungal) composition of the anthropogenic sediments. The samples derive from Later Stone Age (LSA) levels at Bushman Rock Shelter, Limpopo Province, dated to between c. 10,000 and 15,000 years ago.
